## PH 102 Quiz 7

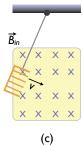

- 1. A magnetic field of  $0.3\,\mathrm{T}$  is directed perpendicular to the plane of a circular loop of wire of radius  $25\,\mathrm{cm}$ . Find the magnetic flux through the area enclosed by this loop.
  - $2.3 \times 10^{-2} \, \text{T}$
  - $\Box 7.1 \times 10^{-3} \,\mathrm{T} \cdot \mathrm{m}^2$
  - $\square \ 4.8 \times 10^{-1} \, \mathrm{T \cdot m^2}$
  - $5.9 \times 10^{-2} \,\mathrm{T \cdot m^2}$
- 2. A magnet and a non-magnet of the same mass are dropped into copper tubes of equal length. Which takes longer to come out?
  - The magnet.
  - $\Box$  The non-magnet.
  - $\Box$  It takes the same amount of time.

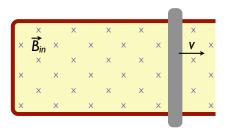

- **3.** A flat metal plate swings at the end of a bar as a pendulum, as shown. When the pendulum is at position **a**, what are the directions of the induced currents and (magnetic) force on the bar, respectively?
  - □ Clockwise; to the left
  - Counterclockwise; to the right
  - □ Clockwise; to the right

- 4. Which pendulum experiences the largest (magnetic) force?
  - **■** a
  - □ b
  - ⊓ c
  - $\Box$  they all experience the same force

- **5.** A conducting bar slides on two fixed conducting rails with, a constant magnetic field pointing into the page. What are the directions of the induced current and the force on the bar, respectively?
  - Counterclockwise; to the left
  - $\hfill\Box$  Clockwise; to the left
  - $\hfill\Box$  Counterclockwise; to the right
  - $\Box$  Clockwise; to the right
